We have now reached an important point in this article, when we will discuss the competitive advantages of a specialized team. Take a look!

1. Durability

It is a fact that properly oiled equipment has a longer service life! Similar to how vital maintenance is for monitoring the "health" of the machinery, lubrication is critical for ensuring that everything is properly adjusted and operating at the right temperature, preventing the spread of wear. The assistance confirms that this occurs on a continuous basis.

2. Development

Here, technical assistance uses its knowledge in selecting the best fluids on the market, matching these products to the equipment to offer the greatest possible performance while decreasing the chances of choking, interruptions or unexpected breakdowns.

3. Productivity

The production line will be operational for extended periods of time and with optimal performance. The process reliability and optimization are such that the company can take more significant steps, with additional demands, customers and investments to leverage the operation.

4. Savings

As we have discussed throughout this article, savings can arise in the short and long term due to reduced waste, production losses, and corrective processes. Besides, the sector benefits from predictability by choosing idle periods for preventive and predictive maintenance.

5. Competitiveness

With the combination of all of the preceding factors, the company that relies on this technical team will command a prominent place in its market, particularly among industries that have not yet invested in this solution. After all, lubrication monitoring is a critical requirement for achieving peak productivity, whether in terms of equipment performance or output volumes.

Reason why PETRONAS is the greatest option

Excellence in technical, chemical, industrial and academic fields. Essentially, this is the brand that combines all of the qualities you look for when assembling the industry's dream team.

PETRONAS now provides a diverse range of lubrication solutions, developed by a large team of leading experts in this field. It is also worth highlighting a brand solution that assists industries during the evaluation of their lubricants in day-to-day operations, the LubTime.

Therefore, if you want to leverage the results of your operation while also maintaining the reliability and performance of your machines, take advantage of this opportunity to contact the PETRONAS team and learn about all they can offer to your business!
